Mountain Weather Forecast

Peak District National Park

Forecast valid from 00:00 on Wednesday 07 Jul 2021 until 23:59 on Thursday 08 Jul 2021

Forecast Issued on Tuesday 06 Jul 2021 at 13:22

Confidence: High confidence in the showery main theme, but low for rainfall detail throughout. Showers likely to be fewer and lighter later in the working week, but probably re-intenisfying into the weekend.

Headline for Wednesday 07 Jul 2021: Early extensive cloud clearing to sunny intervals but, increasingly, a risk of heavy and perhaps thundery showers.

Mountain weather hazards on Wednesday 07 Jul 2021

Blizzards
No Likelihood

Heavy Snow

Precipitation probability							
30%	20%	20%	20%	40%	60%	40%	10%

Forecast for Wednesday 07 Jul 2021

Weather: Extensive low cloud is expected overnight, with this likely to produce some light rain at times, especially on west-facing ground. This should lift and break into daylight hours, with some sunny intervals from mid-morning in places. These should in turn spark increasingly heavy showers, with some slow-moving and potentially thundery with hail later in the day. Conditions probably improving into the evening, although probably too late for much in the way of late sunshine.

Chance of cloud free mountain/hill tops above 600m: Near-nil at first, with extensive cloud above 400 metres, but improving to 80% before lunch as this lifts clear and develops breaks. Some further deteriorations possible locally in heavy showers.

Visibility: Very good, but with significant local deterioration possible in showers.

Meteorologist's View

Nothing to add.

Recent rainfall: measured at Cat & Fiddle: altitude 511m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Tue 06 Jul 2021	20.8mm	35.8mm	42mm

Forecast for Thursday 08 Jul 2021

Weather: A drier and brighter day on the whole, with fewer, lighter showers around when compared with earlier in the week. Perhaps some cloud above the height of the peaks through the middle of the day, with the best sunny spells developing later. The UV index will be high.

Maximum wind: Northwesterly 20mph soon easing.

Chance of cloud free mountain/hill tops above 600m: 30 improving to greater than 90%, with well-scattered cloud on lower slopes early on soon lifting.

Visibility: Very good.

Temperature: **Valleys:** Plus 9 becoming 19 Celsius.
At 600m: Plus 12 Celsius.
Freezing level: Well above the peaks.
